Immediate Joiner

SUMMARY

Immediate joiner and Data Analytics Specialist with 2+ years of hands-on experience in SQL (MySQL), Python, Looker, and data automation. Skilled in analysing large datasets, developing automation pipelines, building interactive dashboards, and delivering data-driven insights to support business decisions. Experienced with enterprise tools including uWorc, Observe.AI, NICE, and DSW, with a strong focus on data quality, process optimization, and stakeholder collaboration.

CORE SKILLS

Data Analysis: Data Cleaning, Data Preparation, Data Mining, Data Validation, Exploratory Analysis, Data Collection, Data Processing, ETL, Data Extraction & Collection Pipelines, Data Governance

Data Management: Master Data Handling, Metadata Standards, Data Quality Checks, Data Governance Support

Tools & Tech: SQL (MySQL, PostgreSQL), Python (Pandas, NumPy), Power BI, Tableau, Advanced Excel

Reporting & Visualization: Looker, Streamlit, Dashboards, KPI Reporting, Pivot Tables, Data Modelling

Soft Skills: Stakeholder Management, Risk Identification, Requirement Gathering, Documentation

Enterprise Tools: DSW, uWorc, Observe.AI, Nice, Jira

PROFESSIONAL EXPERIENCE

Data Analytics Specialist, Uber, Hyderabad, India, January 2026, Present

- Queried and analysed large datasets using MySQL to generate actionable insights and support business decisions
- Developed Python scripts to automate data processing, reporting, and operational workflows
- Built and maintained interactive dashboards in Looker and Streamlit to monitor KPIs, operational performance, and business metrics
- Utilized Observe.AI dashboards to analyse customer interactions, monitor quality metrics, and identify performance improvement opportunities
- Designed and implemented automation pipelines using uWorc to streamline business processes and reduce manual effort
- Leveraged Google Sheets for data validation, reporting, ad hoc analysis, and operational tracking using advanced formulas and pivot tables
- Conducted root cause analysis and collaborated with cross-functional teams to optimize processes and improve operational efficiency
- Ensured data accuracy and consistency through data validation and quality checks

Data Analyst, Pro Solutions, Bhopal, India, January 2024, March 2025

- Managed master data for analytics systems including creation, updates, version tracking, and deletion activities. Supported admin tasks such as user access & role updates
- Performed data extraction, cleaning, and transformation using SQL, Python (Pandas), and Advanced Excel

- Conducted data quality assurance on large squash performance datasets, reducing inconsistencies by 38%
- Built Power BI dashboards for player performance metrics, enabling stakeholders to make data-driven decisions
- Standardized metadata and documentation for reporting pipelines, improving data traceability and audit readiness

Freelance Data Science & Analytics Trainer, June 2024 – Dec 24

- Conduct training on Python, SQL, Power BI, Excel & Data Analytics concepts for students/professionals
- Designed mini data projects, case studies, and practice datasets for hands-on learning

PROJECTS

1. Capacity Planning Tool

- Developed a capacity planning tool to forecast workload and optimize resource allocation using Python and MySQL
- Automated data processing and reporting workflows to improve planning efficiency and reduce manual effort
- Built interactive Looker dashboards to visualize capacity, utilization, and operational metrics
- Enabled data-driven workforce planning by providing actionable insights through automated reports and dashboards

2. Operational Dashboard Migration

- Integrated Observe.AI (OAI) data into the operational dashboard to support business reporting
- Supported the migration from NICE to Observe.AI for operational analytics
- Assisted in migrating dashboards from Looker to Streamlit using Cursor AI
- Improved dashboard functionality and reporting efficiency during the migration process

3. Performance Analytics Dashboard

- Created an end-to-end Power BI dashboard to analyse squash player performance
- Performed data extraction (SQL), data preparation (Pandas, Excel), and validation before visualization
- Collaborated with QA analysts for imported data validation

4. Text Data Cleaning & Preparation for NLP Model

- Cleaned, transformed, and structured unorganized text data for an AI chatbot
- Ensured data quality, removed duplicates, and applied metadata standards
- Ensured compliance with organizational metadata standards

EDUCATION

- PGP – Data Science & Engineering | Great Lakes Institute of Management, Hyderabad | 2023 – 2024
- MCA – Master of Computer Applications | Jabalpur Engineering College | 2021–2023

CERTIFICATIONS

- Google Data Analytics Professional Certificate | Coursera 2024
